Participatory processes in environmental planning and management involve layers of complexity – multiple parties, multiple issues, deeply held values, expert and local knowledge, media influences, and socially embedded conflicts, among them. In this seminar, Steve Daniels will present an integrative conceptual framework for thinking about participatory processes. The intent is to provide a map and compass to navigate through complex conflict-laden, multi-party negotiation landscapes.

A Research Workshop for Graduate Students is scheduled with Dr. Daniels
Thurs Nov. 18th 9am-noon, Grinter 376
(Registration required jsarnold@ufl.edu)
